TARGET READINESS CHECK

Final US receiver report

SYNTHETIC DEMO

Readable target-country handover generated from the HL7 FHIR IPS Bundle

Europe (EU) -> United States | US Core / IPS-style receiver

ITEM	STATUS	NOTE
US Core Patient profile fields	ready	Ready for demo evidence
Race/ethnicity extensions	gap	Optional in demo; not in synt...

Receiver handover notes

US Core readiness view; race and ethnicity are flagged because they are not present in the synthetic source note.
FHIR IPS remains the exchange artifact; this is a readable clinical handover view.

Interoperability note

This PDF is a human-readable rendering. The interoperable source of truth is the HL7 FHIR IPS-style Bundle and its coded Condition, Observation, and MedicationStatement resources. Readiness checks are shown for judge review only; no formal national profile certification is claimed.
